

Kamay Botany Bay National Park

By the time, we arrived at Kamay Botany Bay National Park I was so excited that I could hardly stop talking.

When we got in, we saw the park rangers who were going to show us around the park. They told us to sit on a big grey mat. We talked about animals that no longer live in Australia the animals were possums, goannas, foxes, echidnas and bandicoots.

Then we learnt about the Aboriginals and Captain Cook who first landed/discovered Kama Botany Bay National Park, Captain Cook in the 1776, and we also learnt how to survive, use interesting tools and instruments the Aboriginals used.

Then we went to the museum. We saw a beautiful model of Captain Cook's ship the *Endeavour*, we also saw paintings of Captain Cook, stories and we saw a real cannon.

After that, we went to the bay. We looked at very old graves from the 1800's. The graves were Darby Sutherland, Captain Cook, Joseph Banks and Isaac Smith's grave. After we saw the graves we talked about bio. A bio is something that floats on the water, which is where Captain Cook's boat waited for him.

Now last, but not least we went for a bush walk. In the bush we learnt lots of ways to survive in the wild bush. We saw tools and animals/creatures. The tools and animals we saw were termites, birds, brushes, and paints. Then we finished our journey at Kamay Botany Bay National Park. Then we went to school then home.
